

ASSIGNMENT 2

PROGRAMMING TECHNIQUE I (SECJ/SCSJ 1013)

INSTRUCTIONS TO THE STUDENTS:

- *This assignment must be done **in pairs** (you can choose your own partner).*
- *Your programs must follow the input and output as required in the text and shown in the examples. You must test the programs with (but not limited to) all the input given in the examples.*
- *Any form of plagiarisms is **NOT ALLOWED**. Students who copied other student's program/assignment will get **ZERO** mark (both parties, student who copied and student that share their work).*
- *Please insert your **name, IC Number, section of your class and date** as a comment in your program.*

SUBMISSION PROCEDURE:

- *Please submit this assignment no later than **November 30, 2019, Saturday (3.00 pm)***
- *Only one submission per pairs (partners) that includes 4 files are required for the submission which is the source code (the file with the extension .cpp) and the input file (the file with the extension .txt).*
- *Submit the assignment via the UTM's e-learning system.*

QUESTION 1

Ministry of Higher Education, Malaysia is required to prepare a report of the number of students' intake, enrolment and output in public universities (2015). Write a complete C++ program to calculate the total and average number of students' intake, enrolment and output in public universities for 2015. Then, find the highest and lowest number of students' intake, enrolment and output. Finally, find the range of the number of students' intake, enrolment and output. Write the program according to the following tasks:

Task 1: Write the definition of function **getInput**. The function must read inputs from an input file named "**input1.txt**" consisting of the list of public universities in Malaysia along with its number of students' intake, enrolment and output. The read data are then stored in arrays accordingly. **Figure 1** shows the input file of the program. **Input Validation:** You should ensure that the program will only continue reading the input file if it is successfully opened, otherwise print the error message and terminate the program.

- Task 2: Write the definition of function **calTotal**. This function calculates the sum of elements of an array.
- Task 3: Write the definition of function **getLowest**. The function finds the index with the lowest value in the array.
- Task 4: Write the definition of function **getHighest**. The function finds the index with the highest value in the array.
- Task 5: Using appropriate functions, read inputs from the input file and print it into the output file named “**output.txt**”. *Note:* Use proper output formatting.
- Task 6: Using appropriate functions, calculate the total and average of students' intake, enrolment and output. Then, print it into the output file. *Note:* Use proper output formatting.
- Task 7: Using appropriate functions, find the highest and lowest number of students' intake, enrolment and output. Then, print it along with the name of university into the output file. Finally, find the range of the number of students' intake, enrolment and output. Then, print it into the output file.
- Task 8: You should ensure the program is able to run and display correct output in the output file.

Figure 2 shows the output file of the program.

QUESTION 2

A tele match event has been held in Sekolah Rendah Tebing Tinggi. Three teams are allowed to participate in this match, with each team consisting of four participants. Five (5) events were contested, namely E1, E2, E3, E4 and E5. Table 1 shows the scores that have been collected by each team for the five events. Write a C++ program which can assist the tele match committee to determine the winner for these events. Your program should be able to do the following tasks:

- The program will read input data: team ID, participant ID and **scores** for the five events namely E1, E2, E3, E4 and E5 from an input file named "**input2.txt**" into an array **marks[12][7]** of type **int**. Example of the series of input data in input file is shown in Figure 3.
- The program must be able to notify the user if the input file cannot be opened (failed to open) with proper prompt. The example for user notification where the file fails to open is shown in Figure 4.
- Calculate the total score for each participant.

Table 1: Collected scores

Team ID	Participant ID	E1	E2	E3	E4	E5
1	1001	10	5	8	10	6
	1002	8	7	10	7	9
	1003	7	10	10	6	10
	1004	10	10	8	7	7
2	2001	7	8	10	9	10
	2002	10	8	7	8	10
	2003	8	6	8	8	10
	2004	7	8	8	8	8
3	3001	10	9	10	10	10
	3002	8	7	8	8	8
	3003	7	8	9	10	6
	3004	8	6	8	7	7

```

1 1001 10 5 8 10 6
1 1002 8 7 10 7 9
1 1003 7 10 10 6 10
1 1004 10 10 8 7 7
2 2001 7 8 10 9 10
2 2002 10 8 7 8 10
2 2003 8 6 8 8 10
2 2004 7 8 8 8 8
3 3001 10 9 10 10 10
3 3002 8 7 8 8 8
3 3003 7 8 9 10 6
3 3004 8 6 8 7

```

Figure 3: Input file named “**input2.txt**”

```

Figure 4: Example user notification in case file fails to open

- d. Calculate the total score for each team.
- e. Besides the function **main()**, the program needs to define **three** (3) other functions as described in Table 2. Use appropriate argument (if necessary) for each function.

Table 2: Description for functions

Function	Description
<code>displayLine()</code>	To display lines using the 52 characters of ‘-’. The function should use loop to display the line.
<code>findIndWinner()</code>	To determine the winner for individual category (selected based on the highest total score that was collected by participants). The function should accept the array for a total score of each participant as one of its argument.
<code>findTeamWinner()</code>	To determine the winner of group category (selected based on the highest total score that was collected by teams). The function should accept the array for a total score for each team as one of its argument.

- f. The program needs to print out the following information. Figure 4 shows the example, run of the successful program.

- i. The team ID.
- ii. The participant ID.
- iii. The scores for the five events, E1, E2, E3, E4 and E5 for each participant.
- iv. The total score for each participant.
- v. The total score for each team.
- vi. The winner for individual category (selected based on highest total score that collected by the participants).
- vii. The winner for group category (selected based on highest total score that collected by the teams).

Id	E1	E2	E3	E4	E5	Total
TEAM 1						
1001	10	5	8	10	6	39
1002	8	7	10	7	9	41
1003	7	10	10	6	10	43
1004	10	10	8	7	7	42
TOTAL						165
TEAM 2						
2001	7	8	10	9	10	44
2002	10	8	7	8	10	43
2003	8	6	8	8	10	40
2004	7	8	8	8	8	39
TOTAL						166
TEAM 3						
3001	10	9	10	10	10	49
3002	8	7	8	8	8	39
3003	7	8	9	10	6	40
3004	8	6	8	7	7	36
TOTAL						164
Winner for Individual Category: 3001 (Team 3)						
Winner for Group Category: Team 2 (Score = 166)						
Press any key to continue . . .
